6 AI tools for Playtika, month 1	**20 live apps** shipped in 2026	**58 MB → 455 KB** 3D model	**10 GB PSDs** rethemed, editable

SUMMARY

Full-stack AI developer with a designer's eye. I build AI tools end to end - backend, frontend, model pipelines and deployment - and ship them to production. My edge is engineering that ships, plus the design judgment to know what is worth building.

SELECTED WORK: BUILT AND SHIPPED

OptimizeGLB · optimizeglb.js.org - optimizes, retopologizes and auto-rigs 3D models on the web. Cut a 58 MB production model to 455 KB (-99%).

Voice AI persona · talk.ilans.net - real-time voice and chat agent with memory, Hebrew and English, cloned voice. Productized as a client kit.

Downshift - medication-taper iOS app, live on the App Store. React Native + Supabase, built end to end.

More (Lola - an AI agent with 240+ tools, Lens, InkForge) at ilans.net and github.com/ilan-stack · essays at ilans.net/writing

EXPERIENCE

AI Creative Specialist (Contract) - Playtika — 2026 - present

Built and deployed an internal portal of six AI production tools in my first month - containerized services behind nginx on an on-prem GPU server

- **PSD Retheme** - rethemes a layered game-UI Photoshop file from a text prompt and returns a live PSD - editable text, effects and smart objects intact - after a brief-and-preview approval step. Handles ~10 GB production files; no off-the-shelf tool we found did this end to end.
- **Loc Studio** - localization pipeline that translates, checks in code, and sends every string to several independent AI reviewers - a human is asked only where the evidence is weak. Model cost shown per run.
- **Icon Studio** - generates game icons in the style of an existing art set, from a concept image or a list of names.
- **Spine Extract** - extracts animations, characters or parts from Spine exports, cuts atlases, and transplants characters between files - pure Python.
- Also deployed two of my own pre-existing tools for the team: **AI Studio**, an on-prem ComfyUI studio (image, video, 3D, audio) kept local so studio assets never leave the machine, and **Sprite Studio** for video-to-spritesheet export.

Independent - AI Development & Design Engineering — 2026 - present

Designed and built for clients, end to end

- **The Guberman Group** (accounting & finance group) - a branded toolkit: a presentation builder with the brand's design language and animations built in, an animated email-signature generator for staff, and a Teams video filter that adds the company banner to every employee's camera.
- **HaNoar HaOved VeHaLomed** (national youth movement) - an AI pipeline that turns free-form activity plans into the organisation's official format: one model proofreads with an auditable change log, a second restructures it into their own Word template. Live in production.

Senior Product Designer - Sett — 2025 - 2026

AI tools for a ~100-person playable-ad production team

- Designed an AI character-animation pipeline with a human-in-the-loop review step - ~4 h to ~15 min per asset, adopted team-wide.
- Shipped 5 After Effects extensions with AI built directly into the motion team's workflow, removing context-switching from their day.

Design Lead, Digital Health - Rabin Medical Center — 2023 - 2025

Clinical software used across 4 hospital departments

- Led UX research with physicians and nurses; translated clinical needs into a shipped AI patient-engagement system.
- Authored the team's guidelines for using generative AI in clinical tools, adopted across the digital-health team.

Product Designer - PlayBatch — 2022 - 2023

Product Designer - Bites — 2020 - 2022

B2B SaaS for employee engagement, 10,000+ enterprise users

- Built the design system (tokens + reusable components) that became the single source of truth for design-to-dev handoff - engineers shipped straight from spec.

Creative Director - justAd → Market Group — 2013 - 2020

- Led a 12-person team on mobile ad campaigns for Fortune 500 clients; built a modular ad-template system that cut production time ~60%.

SKILLS

Engineering	Full-stack, production code: TypeScript, Python, JavaScript, Node.js, React, Next.js, React Native & Expo, Swift (macOS). Backend and infra: REST APIs, Docker, nginx, Linux GPU servers, Supabase, Vercel, GitHub Actions, self-hosted services. Graphics: Three.js, PixiJS, FFmpeg.
AI	Agents, tool-calling and MCP servers, agentic development (Claude Code, Cursor), LLMs (Claude Opus 5 / Sonnet 5, GPT, Gemini, Ollama), evals, image / video / 3D pipelines (fal, ComfyUI, Replicate, Flux, Kling, LoRA training), voice (ElevenLabs, Whisper).
Design	Figma (advanced prototyping), design systems and tokens, in-code prototyping, UX research, interaction design, accessibility (WCAG), motion, After Effects, Adobe Creative Suite.
3D & CAD	Blender, Cinema 4D, SOLIDWORKS, Mimics (medical-imaging segmentation), glTF/GLB optimization for the web.
Languages	Hebrew (native), English (fluent, professional).
